

YEAR 3/4~ OUR LEARNING SUMMER TERM 2 WEEK 4

During last week's science lesson, Year 3/4 started to create their own Egyptian themed shadow puppets. We explored how shadows are formed by blocking out the light in the classroom and using torches to create shadows on the walls and ceilings. The children identified that the light could not pass through a solid object and only allowed light to filter around the outside of it which created a shadow shaped like that object. We had lots of fun making hand puppets before we created our Egyptian paper puppets.
